(54) Title: BIOMARKERS FOR OXIDATIVE STRESS

(57) Abstract

This invention relates generally to methods of detecting and quantifying biomarkers of oxidative stress in proteins. The biomarker nay be any amino acid that has undergone oxidation (or other modification, e.g. chloro-tyrosine, dityrosine). Emphasis is given herein m exidized sulfur- or selenium-containing amino acids (SSAA). The biomarker of exidative stress in proteins may be detected with in antibody that binds to oxidized amino acids, specifically oxidized sulfur- or selenium-containing amino acids. The antibody may be nonoclonal or polyclonal. The presence of biomarker or amount of biomarker present in a sample may be used to aid in assessing the fficacy of environmental, nutritional and therapeutic interventions, among other uses.
